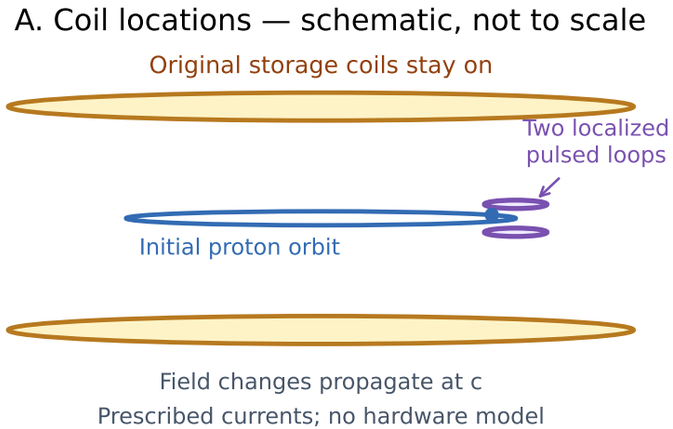
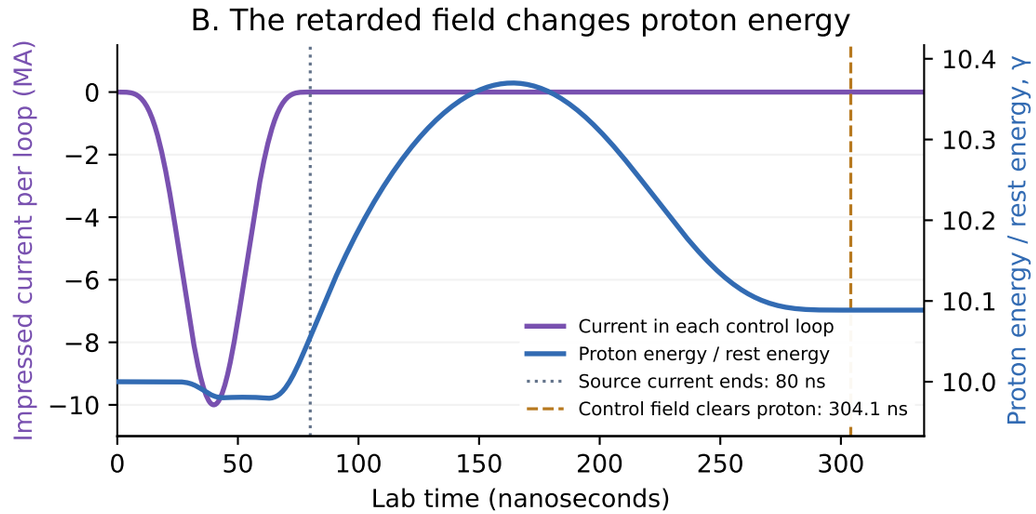
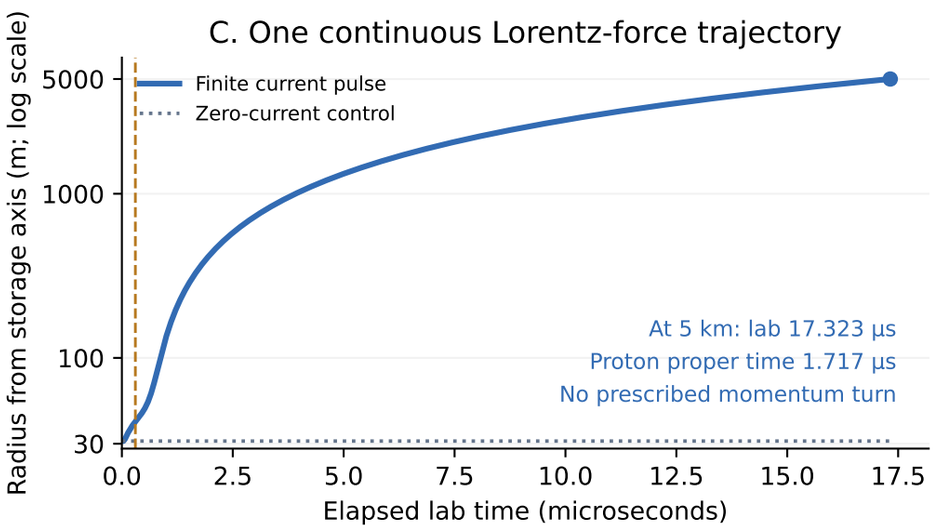
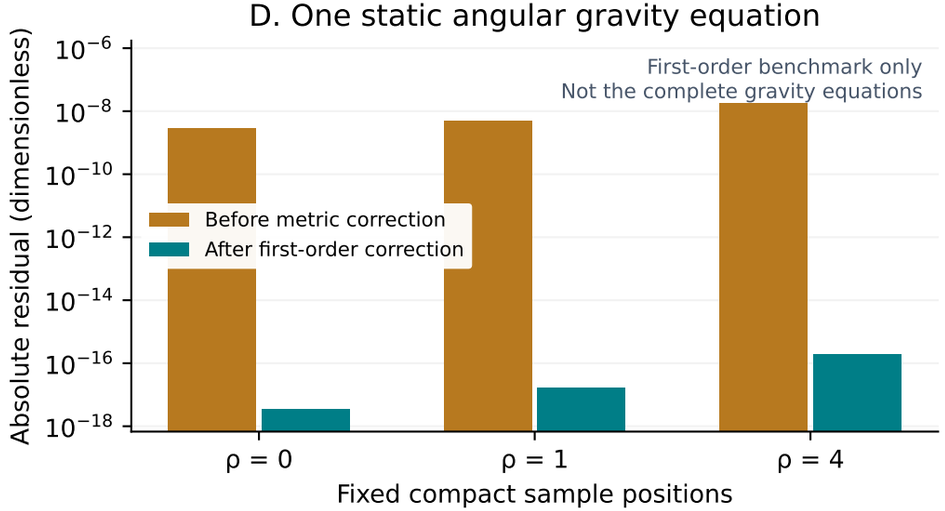
Gravity correction checked; a finite pulse steers the proton

Ideal model calculations • continuous field-driven motion • no constructed apparatus









Gravity: this static correction removes one leading residual. The full quantum source, dynamics and exterior matching remain open.

Proton: retarded fields come from ideal prescribed currents. No finite-conductor circuit, capture, reunion or one-day storage is modeled.

13 → 12 Sep 2027: unproved. **13 → 14 Sep: time dilation is supported; this complete journey is not demonstrated.**
