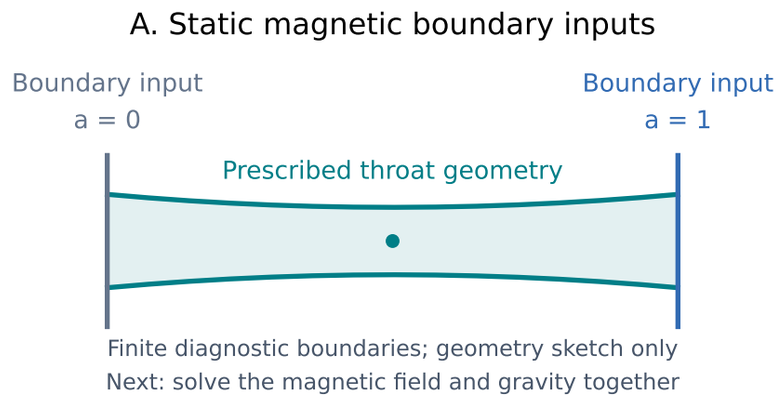
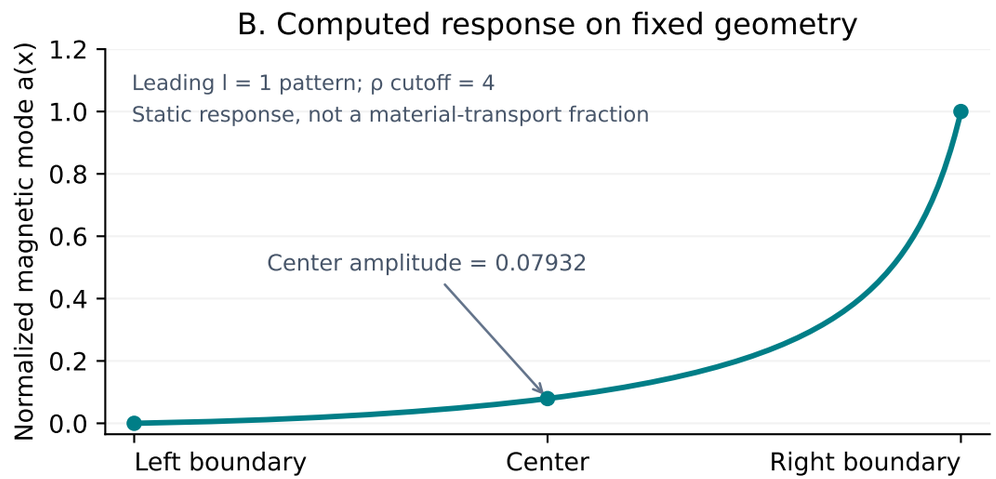
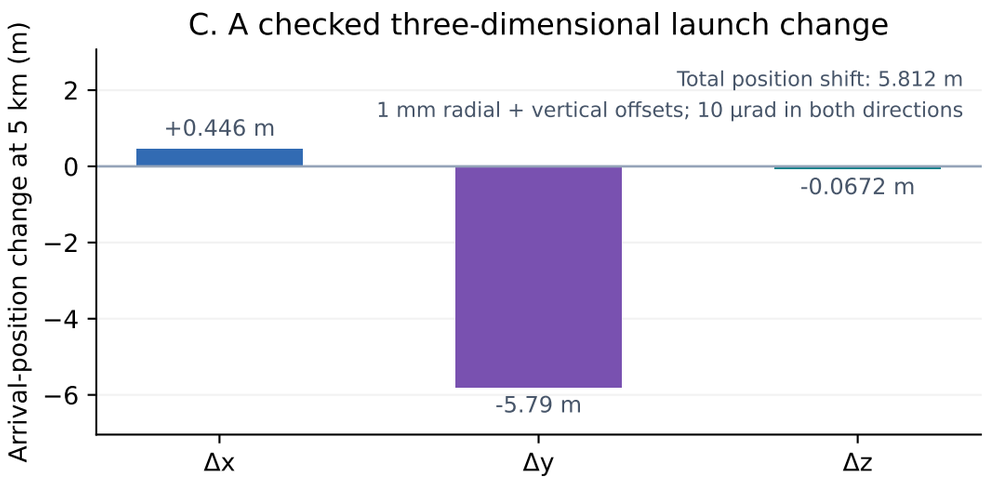
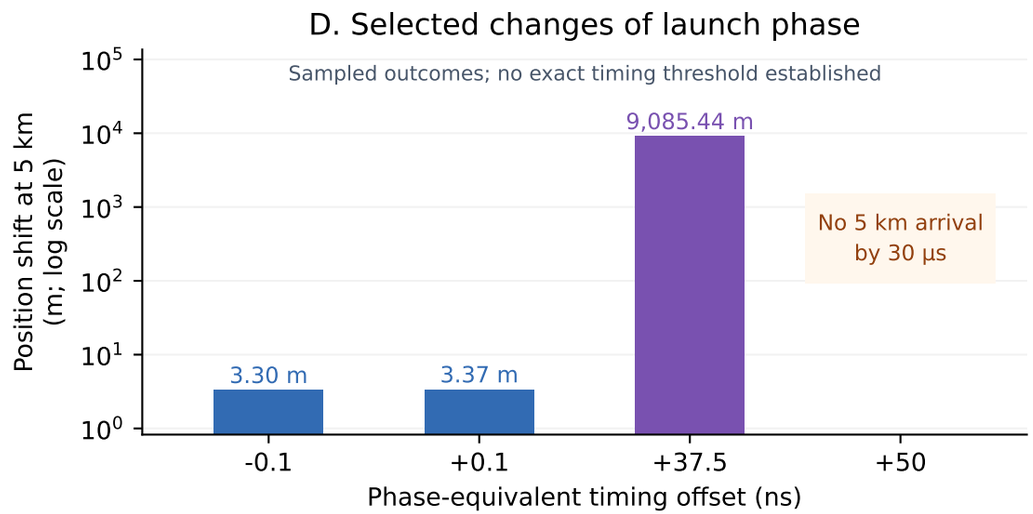
Boundary magnetic response checked; launch changes move arrivals

A static probe on assumed geometry • separate forward-control launch tests • no demonstrated time machine









Magnetic probe: unique finite static response on prescribed geometry. Matter passage, the coupled quantum source and full stability remain open.

Forward controls: sampled sensitivity only. Arrival changes are physical model responses, not numerical errors or verified receiver tolerances.

13 → 12 Sep 2027: unproved. **13 → 14 Sep: time dilation is possible; a complete one-day journey remains untested.**
