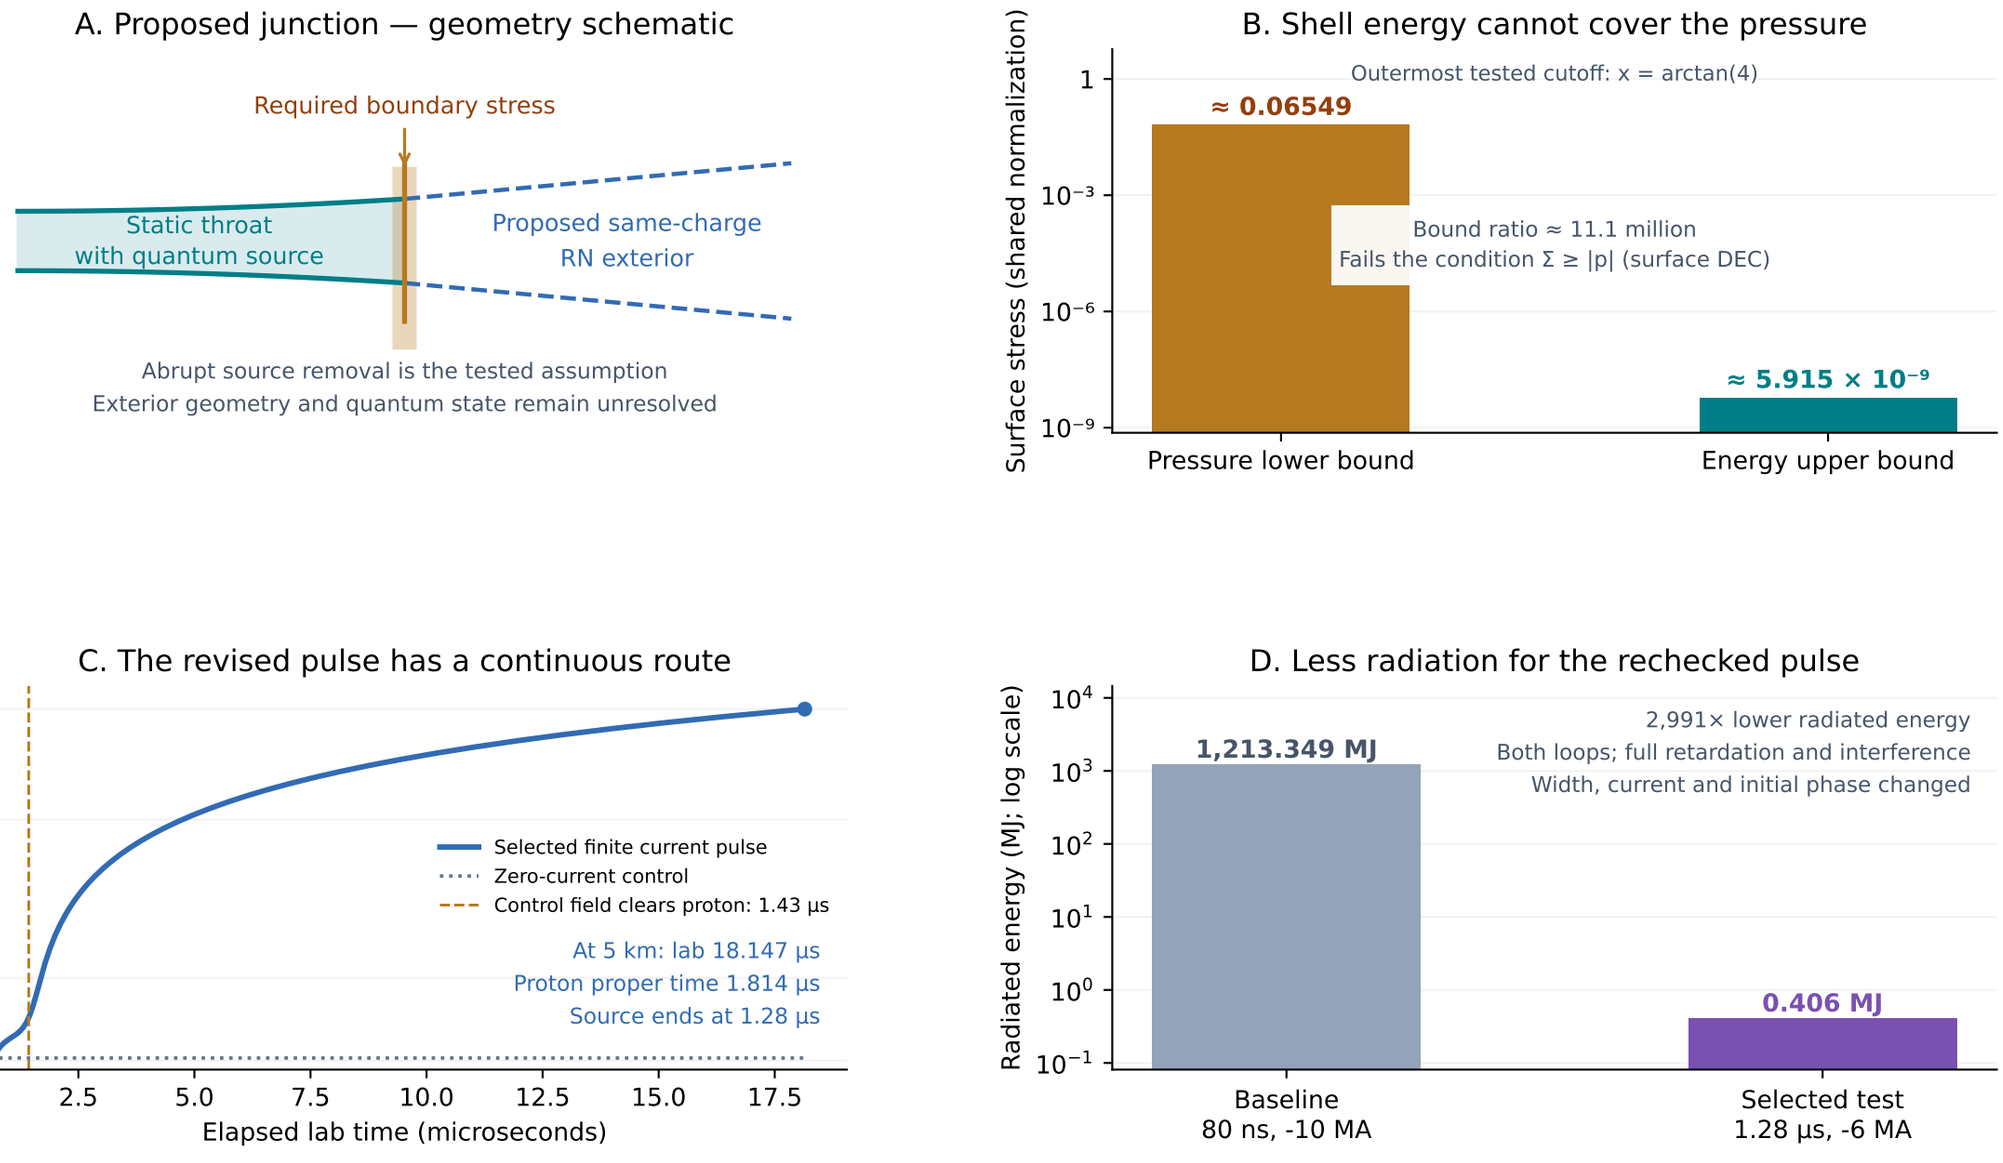
The exterior join remains unresolved; a revised pulse radiates less

Separate gravity and proton-source calculations • ideal models • no complete apparatus



Junction: restricted static, outward RN family; all three tested cutoffs fail this condition. Other continuations remain open.

Pulse: ideal imposed currents; radiation is only part of the source budget. Finite conductors, capture and one-day storage are unmodeled.

13 → 12 Sep 2027: unproved. **Forward time dilation is supported; a working device remains unbuilt.**
