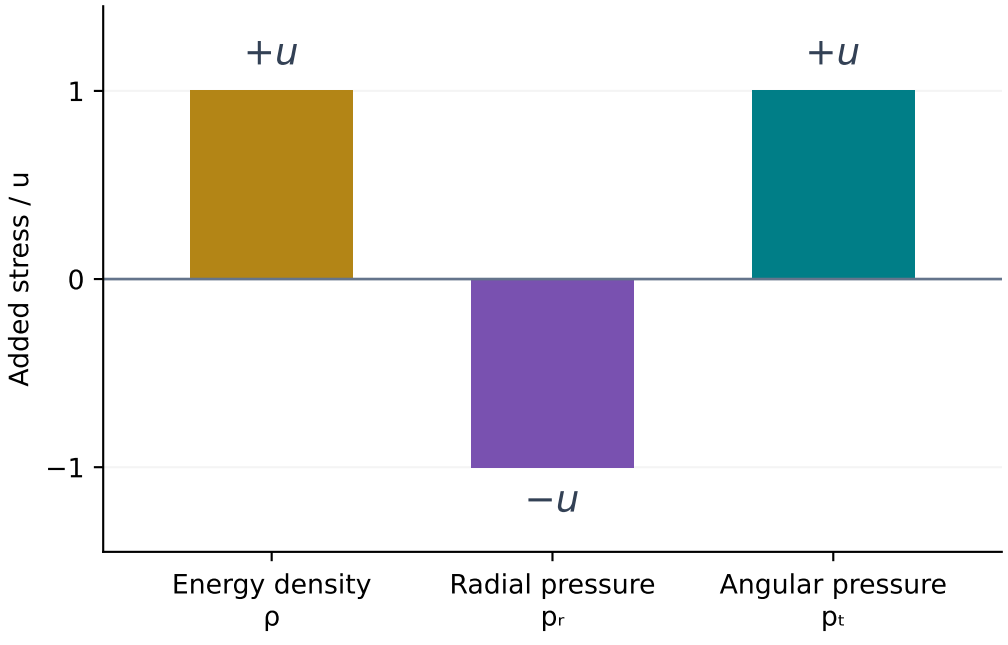
A matched quantum source changes geometry without opening the throat

Leading O(q) bulk action | Fixed smooth geometry | Model validation, not a material construction

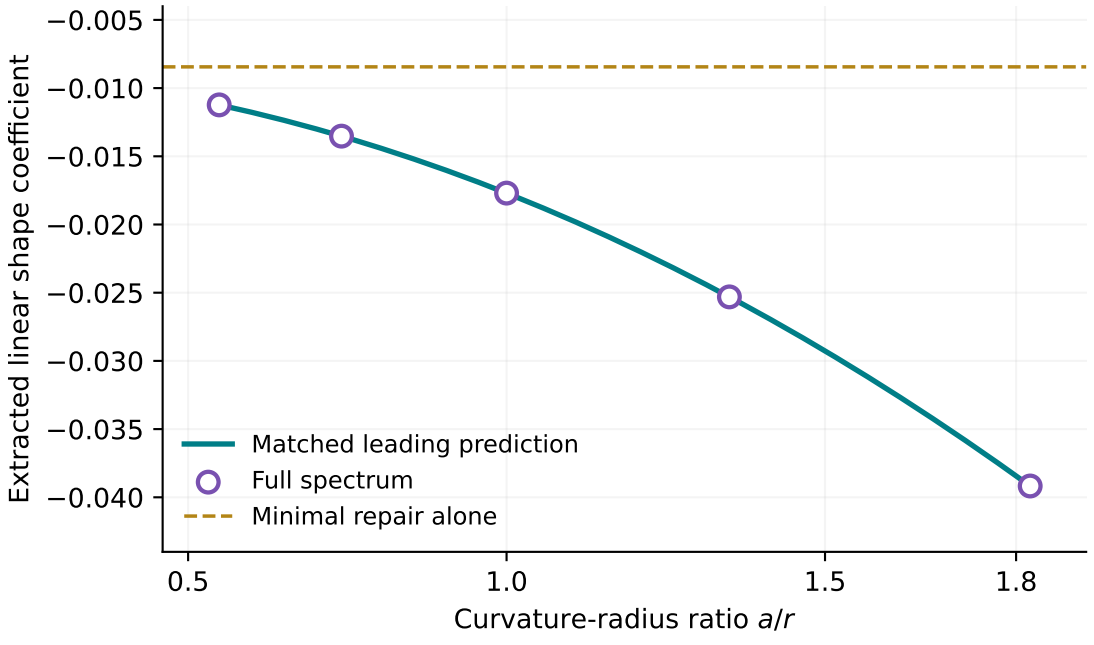
A. Added energy and pressures



$u = d_{\mathrm{gap}} q / R^4 > 0$

$\rho + p_r = 0$**: no added radial opening stress.**

B. Unequal-radius test at q = 100,000



Prediction: $C_{1H} + C_{1S}(a/r)^2$

Largest sampled coefficient mismatch: 5.73e-08

Right panel: fixed-volume derivative of $3W(3q) - 8W(2q) + 5W(q)$, with the known quadratic term removed.

The source shifts the product reference. Physical interfaces, the returning-path state and full stability remain unresolved.

No constructed stable medium or 13 Sep 2027 → 12 Sep 2027 passage demonstrated.
