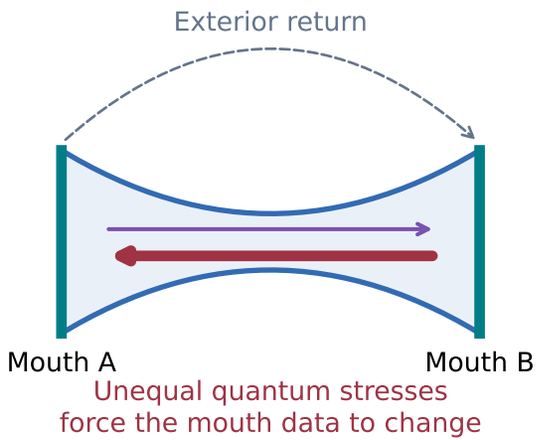
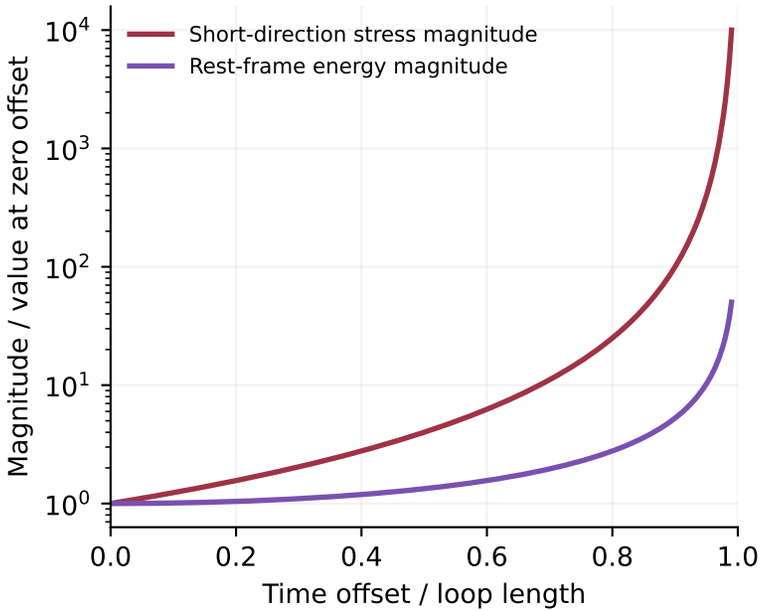
A time offset changes the support; RF restores proton energy

Our mathematical checks • assumed wormhole geometry and an ideal accelerator model

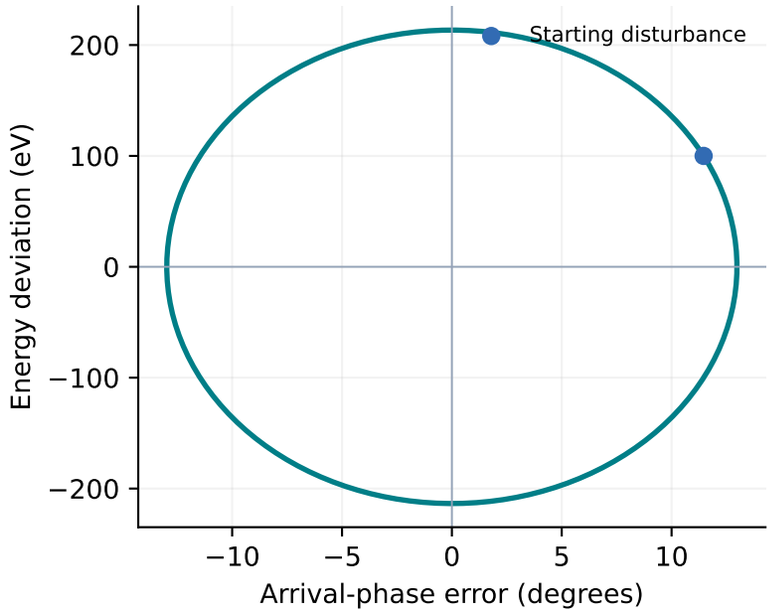
Assumed passage with a physical offset



Prescribed vacuum at fixed loop length



Proton: restoring phase–energy motion



Past: this shifted vacuum cannot support the unchanged static throat. The curves are a family of states, not an evolution or a material recipe.

Future: a 1 mV effective RF gap balances mean loss and gives a restoring cycle of about 3.9 seconds. Full cavity and transverse motion remain open.

Next: couple physical mouth driving to its quantum source; connect proton RF to injection and extraction. Schematic is not to scale.

13 → 12 Sep 2027: unproved. 13 → 14 Sep: time dilation is supported; the complete proposed apparatus is not demonstrated.
