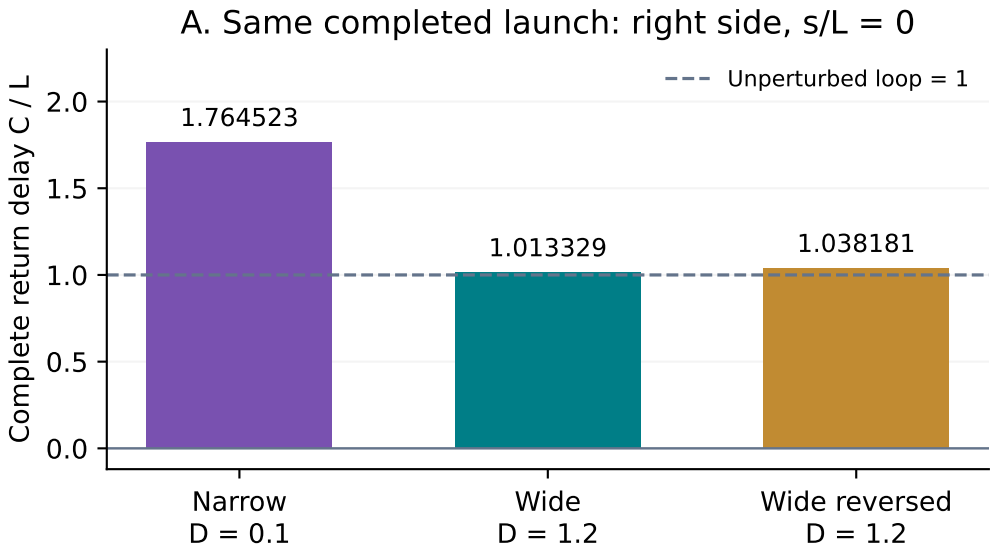
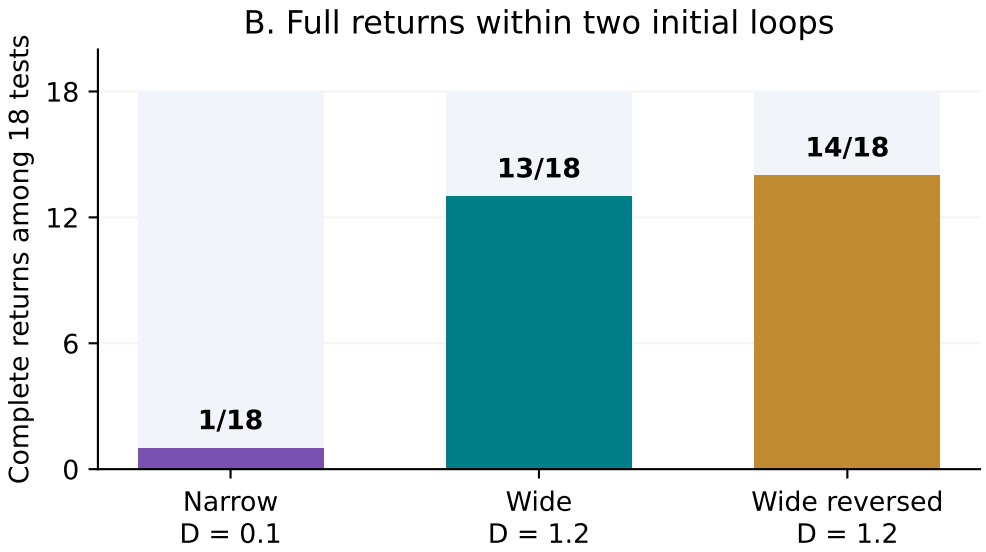
Improved passage in the model; no past return found

Matched initial energy $I/b_0 = 1.276046$ • Same 18 launch phases and sides • Two initial loops



C = 0 is closed-null; a past return would require C < 0.



Throat exits found: 1/18, 17/18, 17/18, respectively.

Changing D also changes the assumed loop geometry and background support; this is not just pulse shaping.

L is each initial loop time. Missing returns concern only the finite interval; all times use optical model units.

No 4D source, stable medium or 13 → 12 Sep 2027 passage established.
