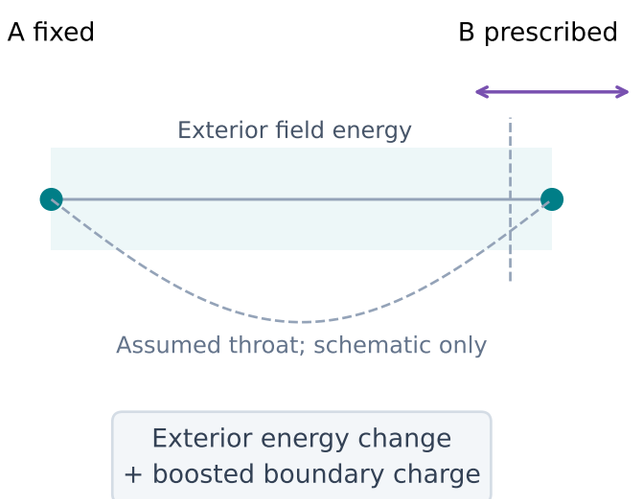
Finite prescribed motion: energy balance closes; no past return in this test

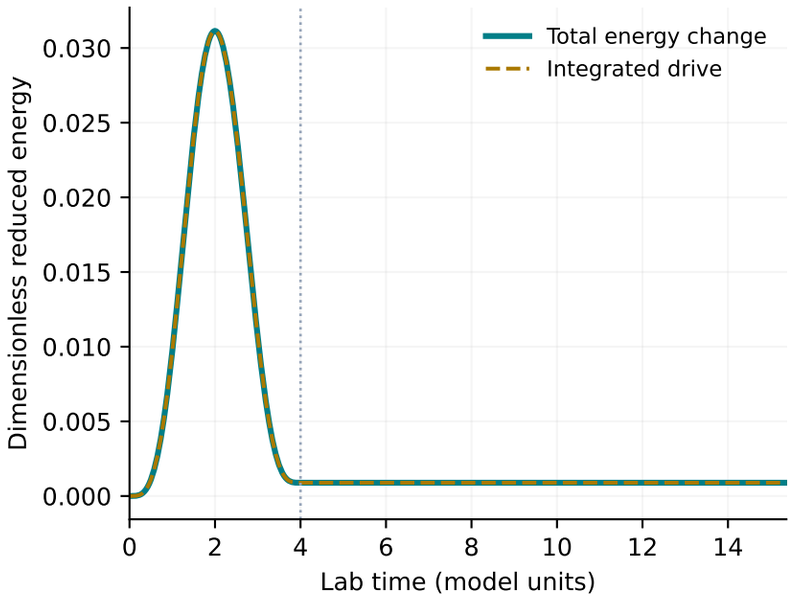
Composed rays and proper clocks | Prescribed 5% excursion | Assumed throat and flat exterior

A. Moving exterior energy domain



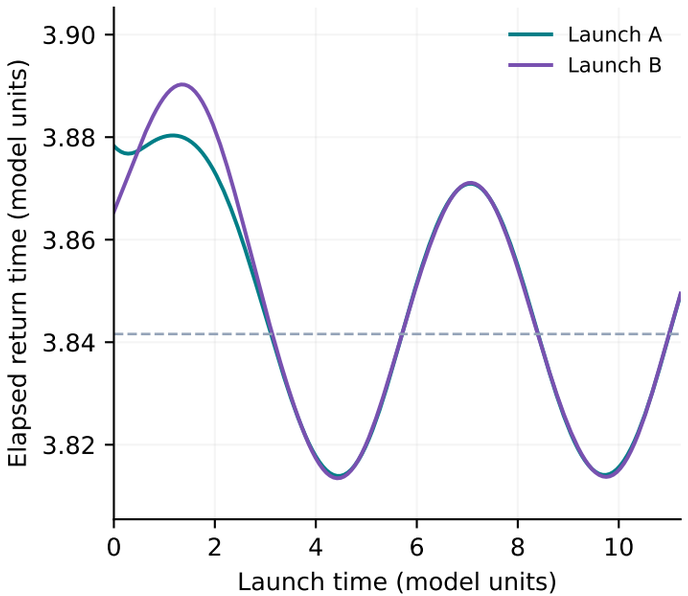
Motion lasts 4 model units, then returns to the initial position.

B. The reduced balance closes



Final reduced transfer: 0.0008899
Sampled balance residual: 2.84e-10

C. Complete elapsed return time



Zoomed vertical scale; all returns positive.
Minimum 3.8135; baseline 3.8416.

Energy uses the $M_0 = 0$ boundary-charge reference; this dimensionless balance is not an apparatus energy budget in joules.

Physical mouth matching, motion generation, material preparation and nonlinear stability remain unresolved.

No constructed stable medium or 13 → 12 Sep 2027 passage demonstrated.
