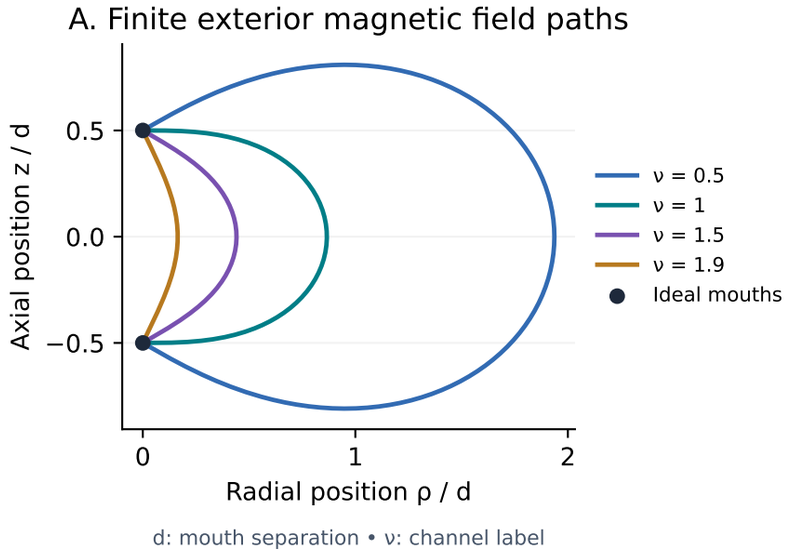
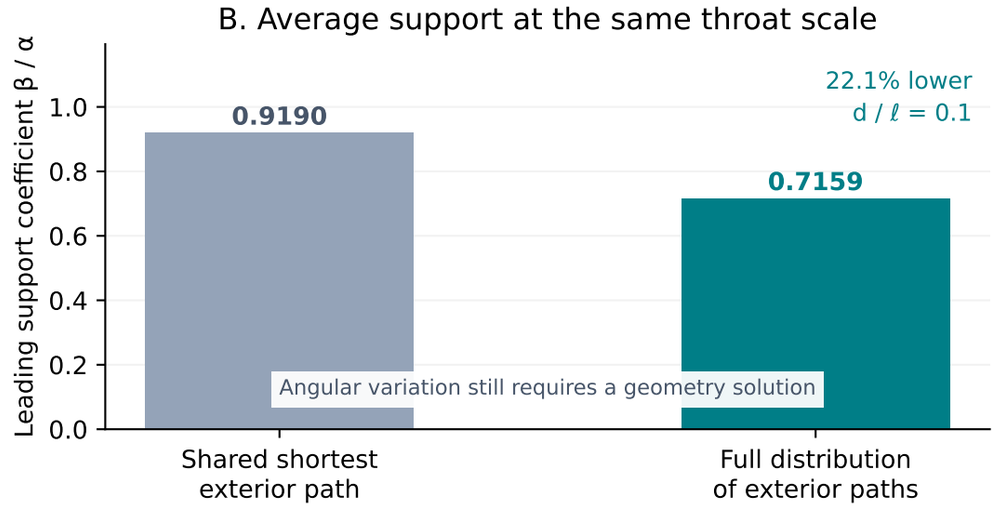
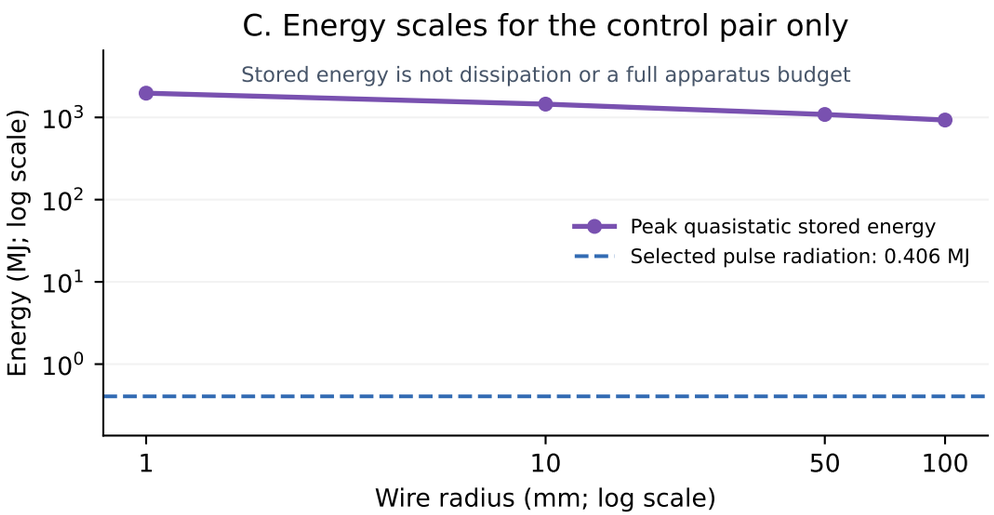
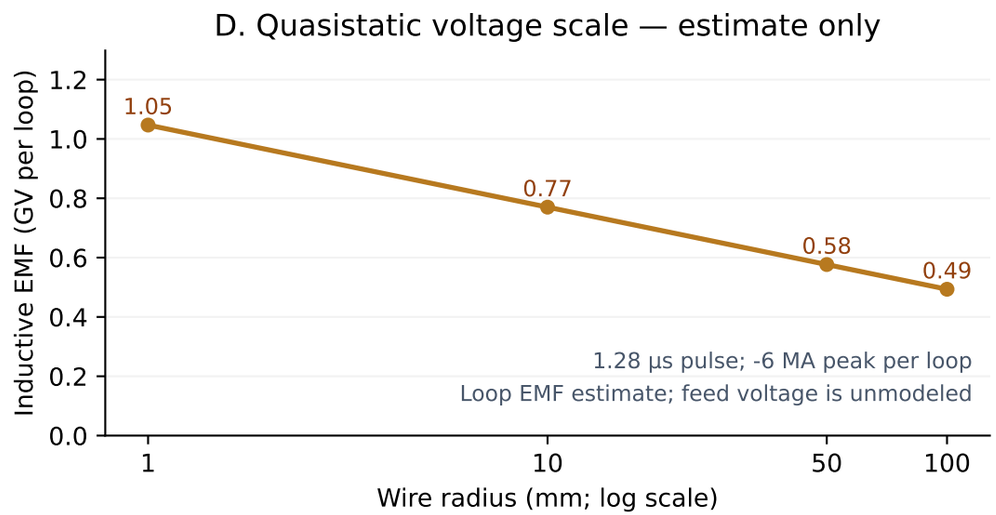
Finite paths lower average support; conductor demands remain large

Leading exterior-field model and control-coil estimates • separate calculations • no built medium









Paths: leading flat-exterior approximation. Mouth matching, angular gravity response, field leakage and state preparation remain open.

Conductors: isolated control-pair estimates; original storage-field cross terms, supports, material response and the driver remain unmodeled.

13 → 12 Sep 2027: unproved. **Forward time dilation is supported; a working device remains unbuilt.**
