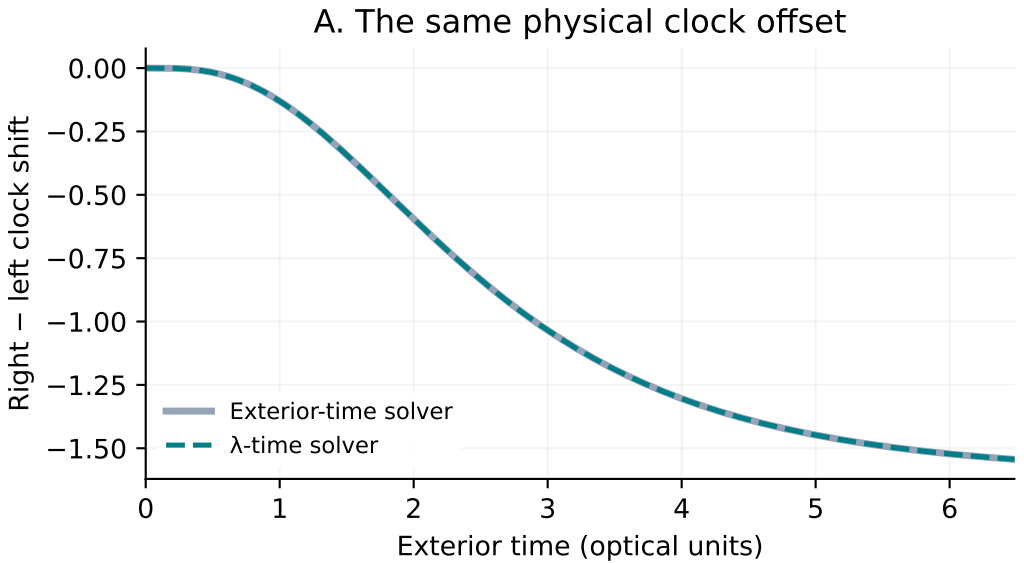
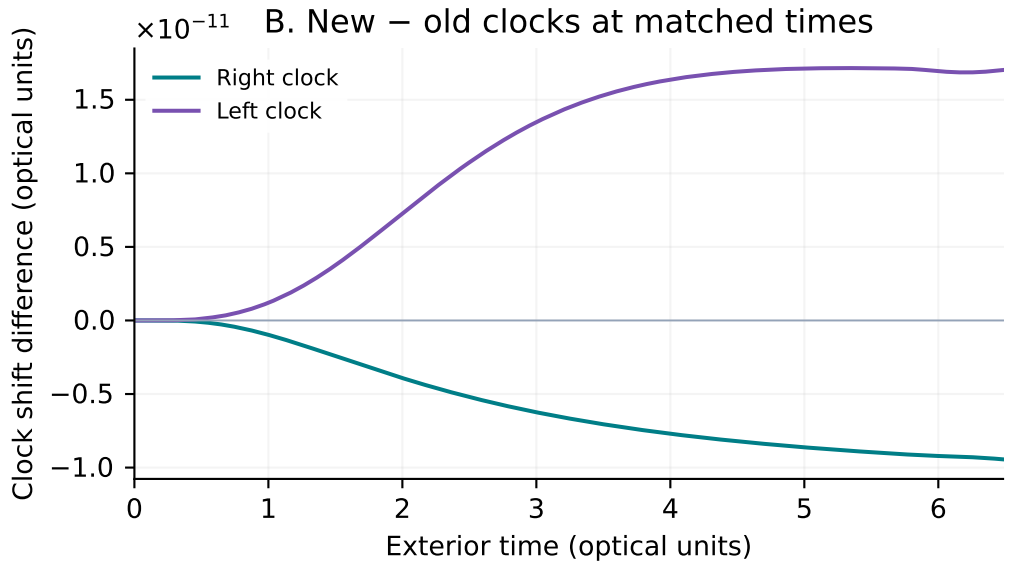
New coupled solver agrees; no backward return found

Same initial pulse: amplitude 0.05 • Clocks synchronized initially • Fixed-delay exterior



Curves overlap at shared exterior times.



Max displayed |difference|: 1.72e-11 (optical units).

Final equal-λ slice: sR = 6.535826, sL = 6.486717; normalized energy-ledger residual 1.56e-10.

These pulses test only the shared regime; the extra affine domain remains untested. Exterior gravity remains unresolved.

No 4D stable medium or 13 → 12 Sep 2027 passage established. Optical units are not seconds.
