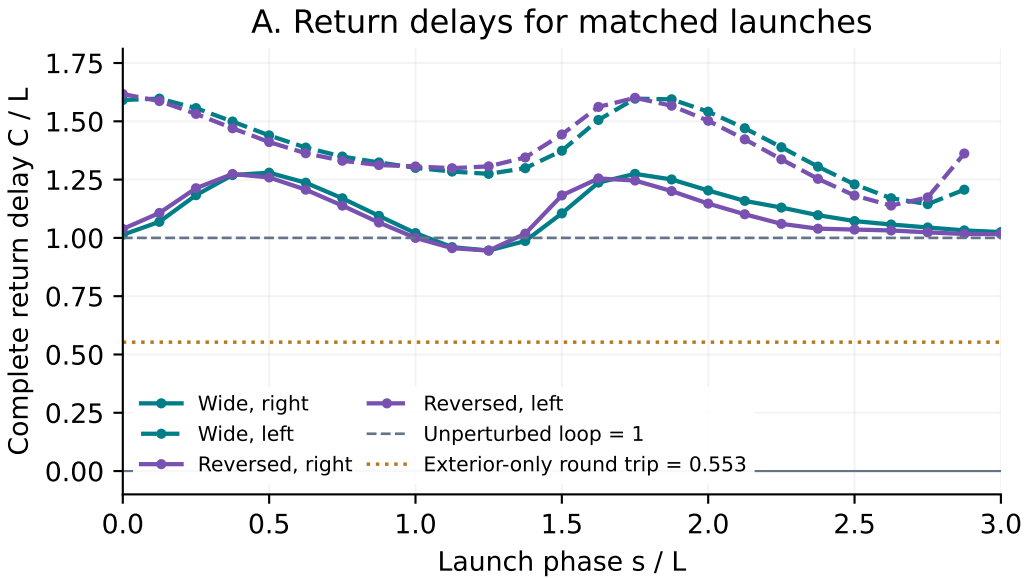
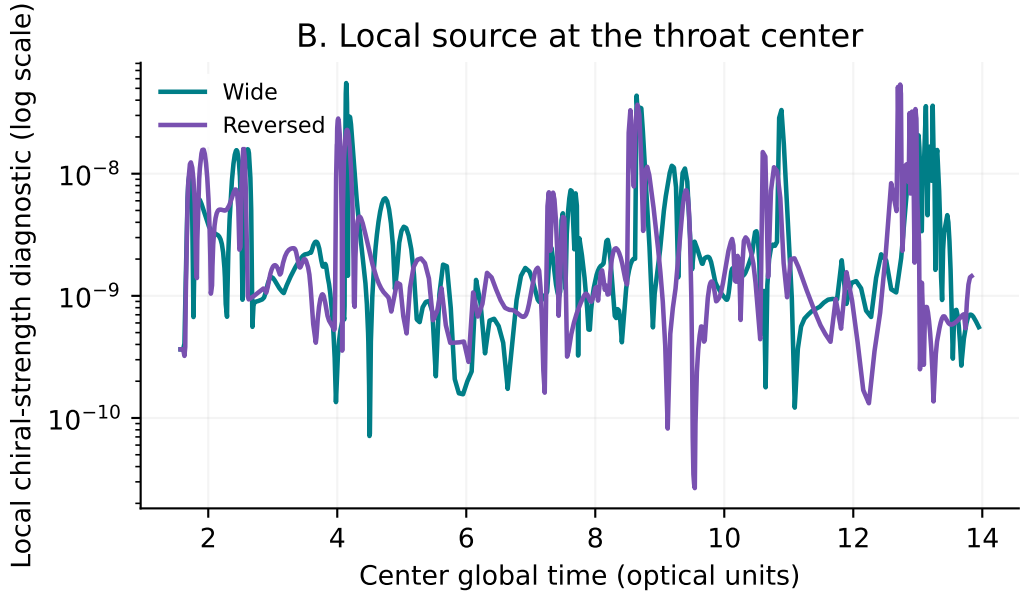
Later returns improve; no past return or exterior shortcut found

Four initial loops • Identical launch phases and sides • Declared source scale $\alpha = 10^{-9}$



Gaps: no throat exit in the window. C < 0 would mean a past return.



Both chiral components evaluated at the same center event.

Full returns within four initial loops: 47/50 wide; 47/50 reversed. Found exits determine the plotted delays.

Source strength of order 1 invalidates the weak-source approximation. Small center values do not prove global stability.

Optical model units only. No 4D source, stable medium or 13 → 12 Sep 2027 passage established.
