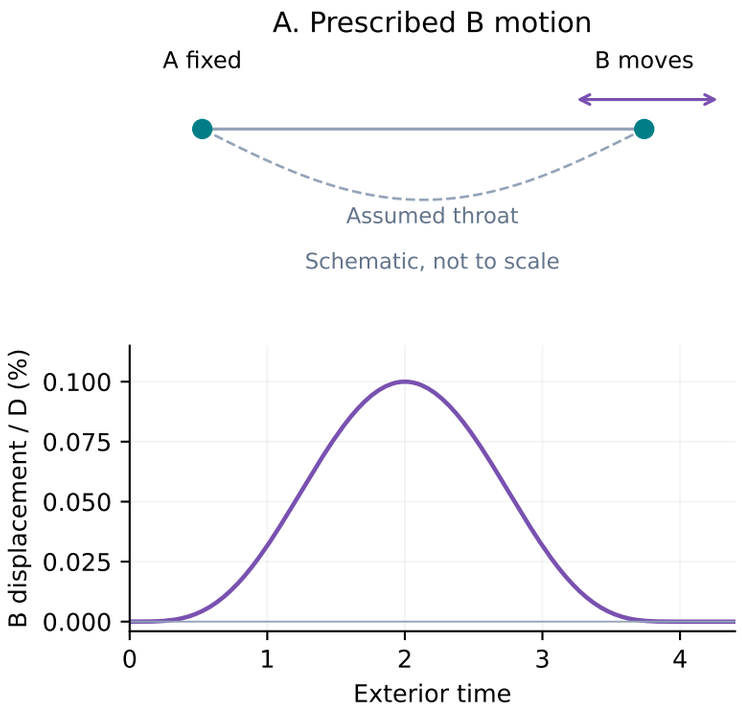
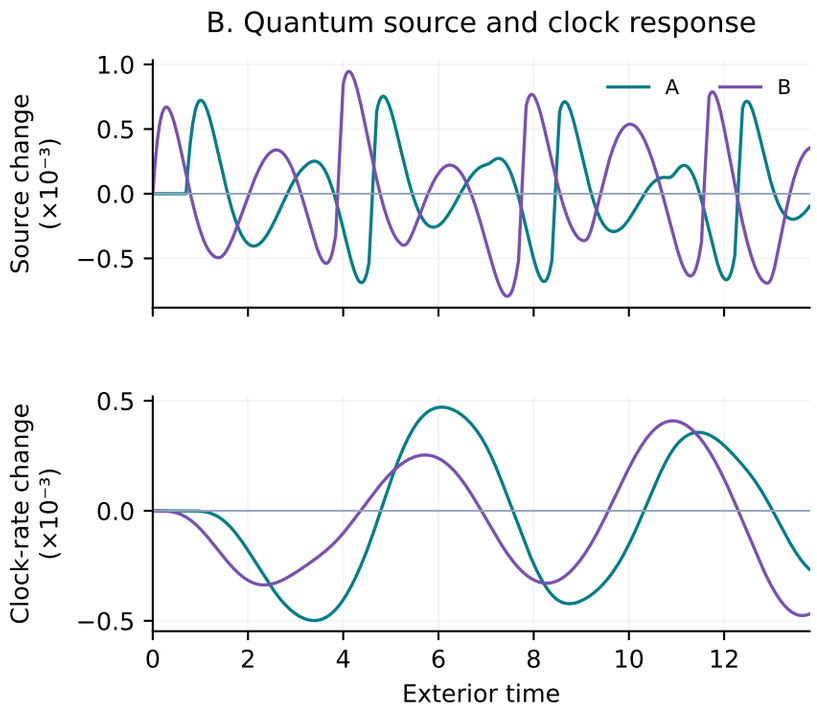
Prescribed motion changes the clocks; full returns remain positive

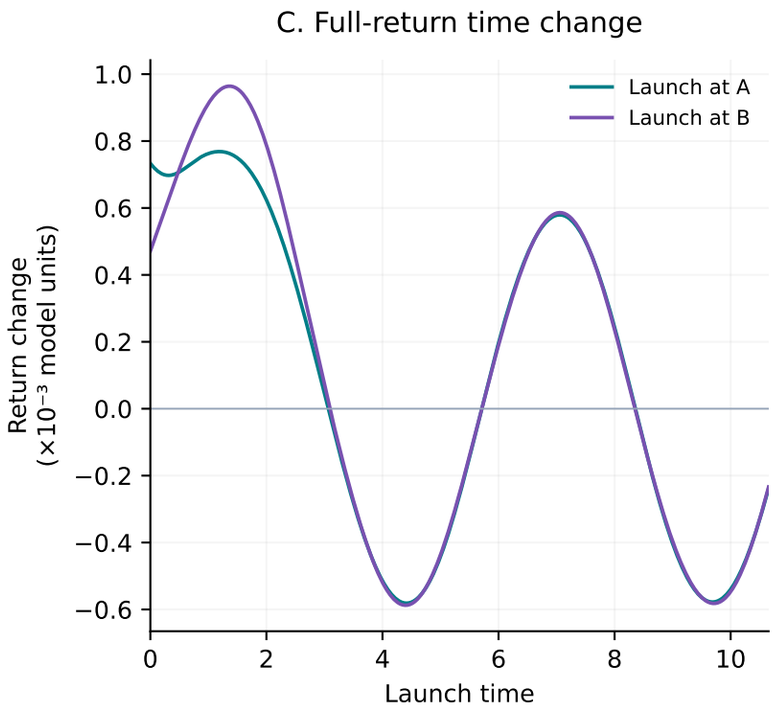
A fixed; B moves by 0.1% of initial separation | Assumed throat | Linear response in model time units



Prescribed duration: 4.
Motion generation is not solved.



Source-chart changes alone
do not establish emitted radiation.



Baseline return: 3.8416
Shortest sampled return: 3.8410 > 0

Return curves include direct exterior-path change and induced clock response; all transit times are first-order predictions.

Physical mouth matching, exterior gravity and preparation remain unresolved; finite sampled behavior does not prove stability.

No constructed stable medium or 13 → 12 Sep 2027 passage demonstrated.
