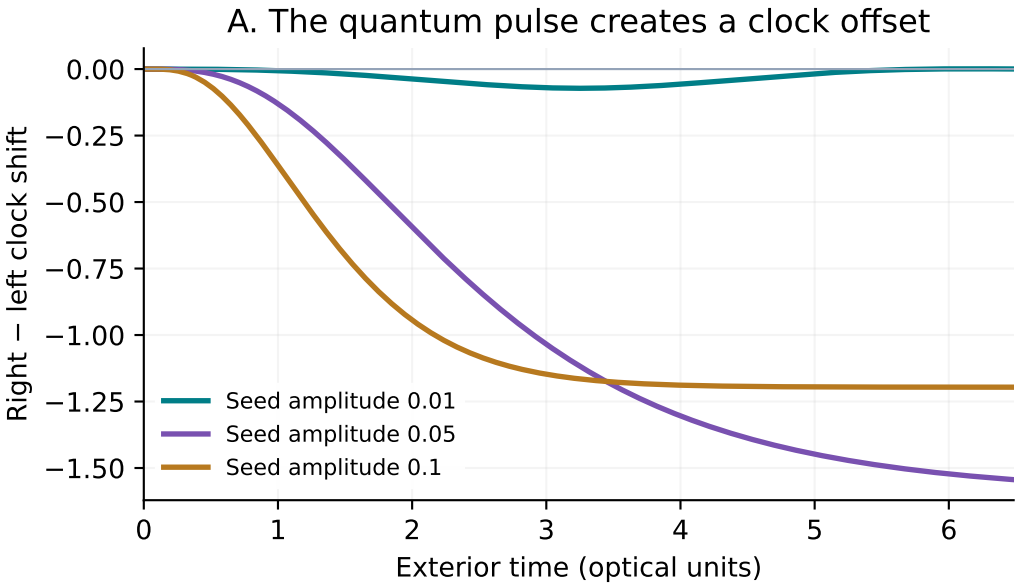
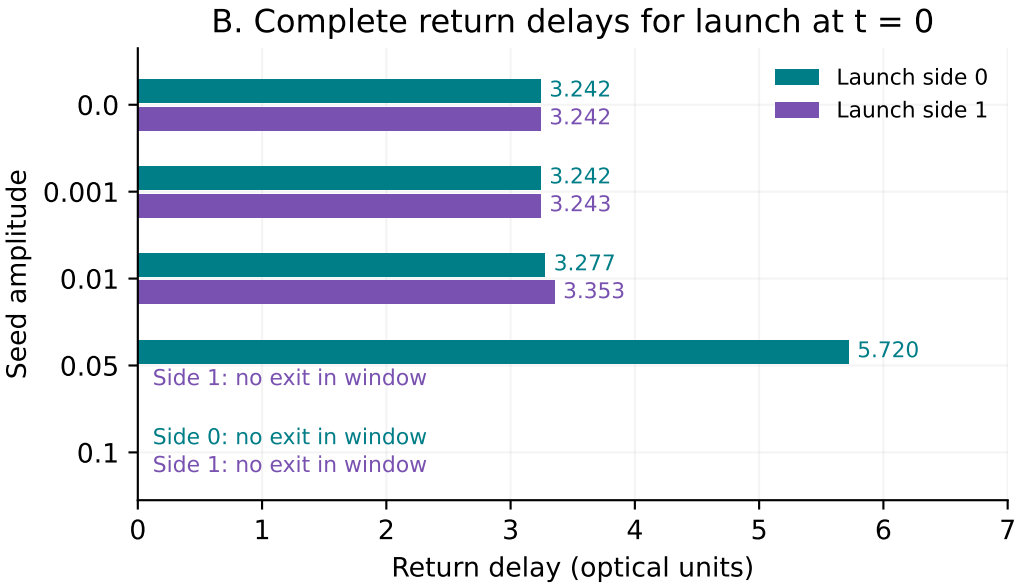
Clock offsets appear; no tested return reaches the past

Initial quantum pulse • Coupled reduced feedback • Fixed exterior delay D = 0.1



A coordinate clock difference alone does not test past travel.



Window ends at 6.483185; missing exits do not prove trapping.

Exterior gravity and physical preparation remain unresolved. Optical units are not seconds; the pulse supplies initial energy.

No stable medium or 13 → 12 Sep 2027 passage established.
