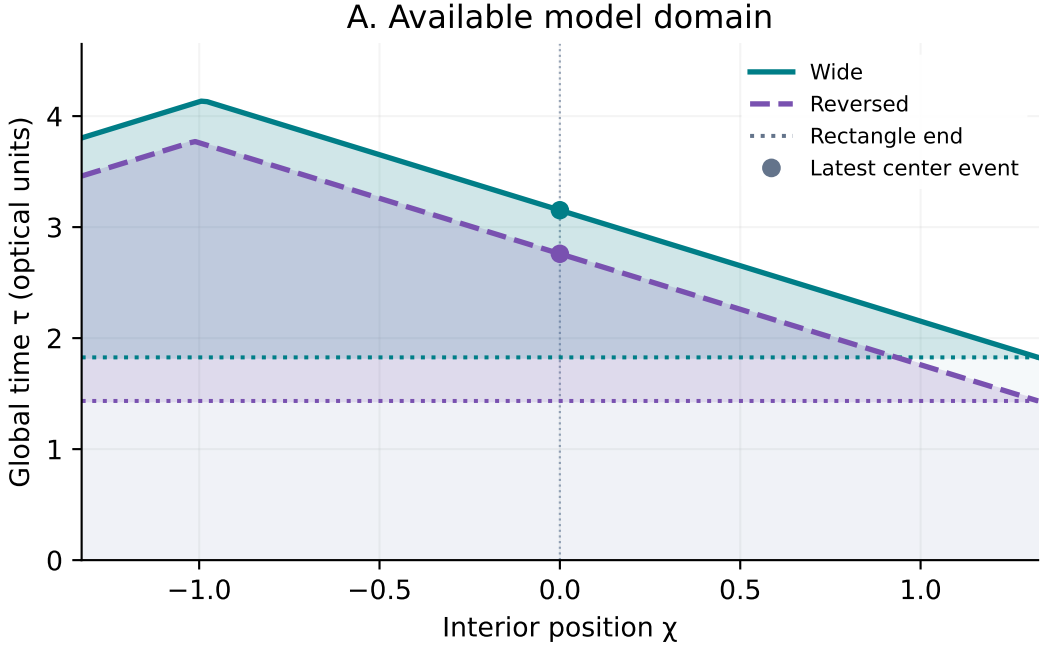
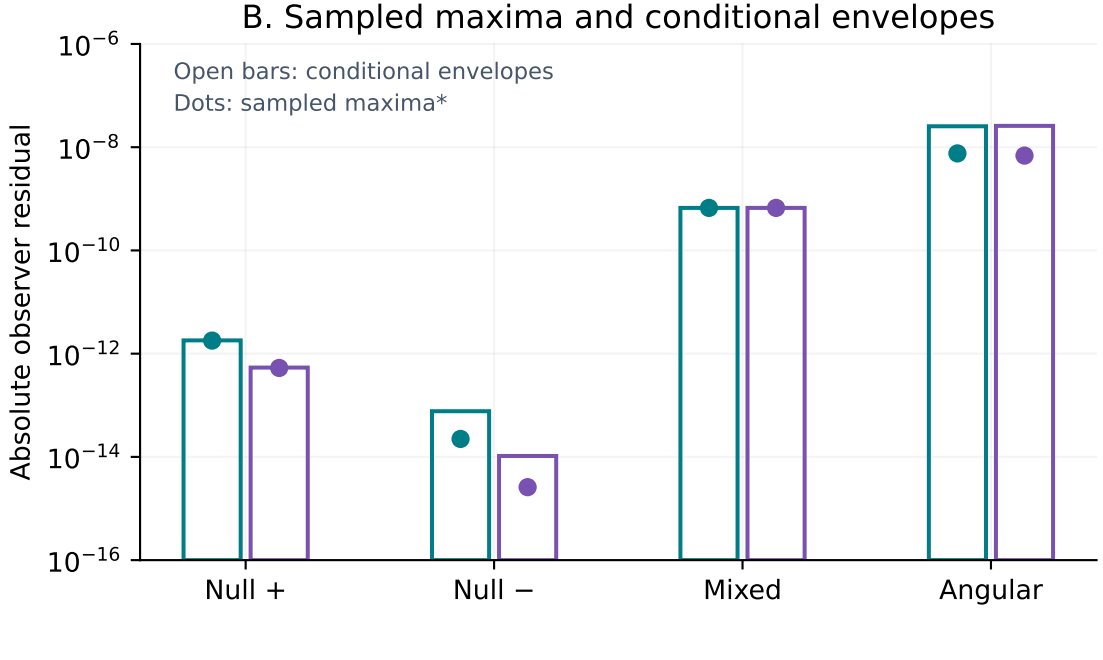
Extending the equation check beyond the center

Finite interior only: $|\chi| \le \arctan 4$ • $\eta = 4$ • $\alpha = 10^{-9}$ • Specified Polyakov closure



A rectangle misses the darker late region.
At the center: Wide: 1.826 → 3.152; Reversed: 1.434 → 2.760



Largest component envelopes
Wide: 2.543e-08 / Reversed: 2.588e-08

* Wide peak scan unresolved: last change 0.530% exceeds the 0.5% target. Dots are not certified true peaks.

Analytic inequalities use numerical maxima of six field quantities; these are not certified continuum bounds.

Residuals: $r_e^2(G - 8\pi GT)$, specified contractions. Hypothetical geometry; near-mouth/exterior regions and stability unresolved.

No constructed medium or 13 → 12 Sep 2027 passage established.
