One-atom project: mathematical bounds for the supporting field
Field-following profile: upper bound
Frozen cross-section: lower bound
RMS angular distance from its center (radians)
First nonzero excitation frequency times D / c
Integer flux q (curves show the enclosing formulas)
Integer flux q (curves show the enclosing formulas)
Whole collar, 0.85 <= mu/q <= 0.95. Different trial and slice operators; no global gap, supported opening or atom passage.
