Short nonlinear evolution of the candidate field
Outward negative null stress persists
Null stress / cutoff^4 (x 1,000,000)
Comoving radius / initial width
Ht=0.00
Ht=0.25
Ht=0.50
The core deepens, then eases
Central null stress (x 1,000,000)
Expansion time Ht
No spatial neck at saved times
Minimum areal-radius derivative factor
Necessary for a spatial neck
Expansion time Ht
Finite basis and domain, Ht up to 0.5. No long-term stability, available material, traversable bridge or backward passage established.
